Berlin, 19<sup>th</sup> of May 2016

FGW Technical Committee for Wind Potential (TC WP) – resolution of 19<sup>th</sup> of May 2016 according to  
proposal from 04<sup>th</sup> of May 2016:

The TC WP votes for the following supplement to revision 9 of the technical guideline part 6 (TG 6).

Within the foreword on page i, the bold paragraph stated below shall be added next to the following  
citation:

“[...]”

A report on the determination of wind potential and energy yield has to be compiled; the principal  
results shall be determined using the methods described in this Guideline.”

**“With the current revision all previous revisions of TG 6 will be withdrawn. The determination of  
wind potential and energy yield shall take place exclusively according to revision 9 from 1<sup>st</sup> of July  
2016 on.”**

Rationale:

TC WP meeting on April 04<sup>th</sup> 2016 recognized that even now expert opinions are created according to  
revision 8 of TG 6 by accredited experts. Detailed discussions led to the Decision to carry out a circular  
voting procedure on a supplement of TG 6, which declares this practice as not permissible any longer.

On behalf of FGW TC

Bente Klose
